- We used Action Text to enable rich-text editing for responding to support requests. With just a few lines of code, we have a cross-browser rich-text editing experience that works.
- We stripped out the rich text to send a plain-text email of our rich-text response.

Playtime

Here are some things you can try on your own:

- Modify the product editor to allow products to have rich text.
- Change the support request to find all orders for the email, not just the most recent.
