we'll add it to the `ApplicationRecord` class:

rails7/e1/ar/encrypter.rb

```
class ApplicationRecord < ActiveRecord::Base
  self.abstract_class = true

  def self.encrypt(*attr_names)
    encrypter = Encrypter.new(attr_names)

    before_save encrypter
    after_save  encrypter
    after_find  encrypter

    define_method(:after_find) { }
  end
end
```

Given this, we can now add encryption to any model class's attributes using a single call:

```
class Order < ApplicationRecord
  encrypt(:name, :email)
end
```

A small driver program lets us experiment with this:

```
o = Order.new
o.name = "Dave Thomas"
o.address = "123 The Street"
o.email   = "dave@example.com"
o.save
puts o.name

o = Order.find(o.id)
puts o.name
```

On the console, we see our customer's name (in plain text) in the model object:

```
ar> ruby encrypter.rb
Dave Thomas
Dave Thomas
```
