Let’s take a look at the controller code:

rails7/depot_a/app/controllers/products_controller.rb

```
class ProductsController < ApplicationController
  before_action :set_product, only: %i[ show edit update destroy ]

  # GET /products or /products.json
  def index
    @products = Product.all
  end

  # GET /products/1 or /products/1.json
  def show
  end

  # GET /products/new
  def new
    @product = Product.new
  end

  # GET /products/1/edit
  def edit
  end

  # POST /products or /products.json
  def create
    @product = Product.new(product_params)

    respond_to do |format|
      if @product.save
        format.html { redirect_to product_url(@product),
          notice: "Product was successfully created." }
        format.json { render :show, status: :created,
          location: @product }
      else
        format.html { render :new,
          status: :unprocessable_entity }
        format.json { render json: @product.errors,
          status: :unprocessable_entity }
      end
    end
  end
```
