```
def sales_graph
png_data = Sales.plot_for(Date.today.month)
send_data(png_data, type: "image/png", disposition: "inline")
end
```

The options are as follows:

:disposition *(string)*
: Suggests to the browser that the file should be displayed inline (option `inline`) or downloaded and saved (option `attachment`, the default).

:filename *string*
: A suggestion to the browser of the default filename to use when saving this data.

:status *(string)*
: The status code (defaults to `"200 OK"`).

:type *(string)*
: The content type, defaulting to `application/octet-stream`.

:url_based_filename *boolean*
: If `true` and `:filename` is not set, this option prevents Rails from providing the basename of the file in the Content-Disposition header. Specifying the basename of the file is necessary to make some browsers handle i18n filenames correctly.

A related method is `send_file`, which sends the contents of a file to the client.

```
send_file(path, options…)
```

This sends the given file to the client. The method sets the Content-Length, Content-Type, Content-Disposition, and Content-Transfer-Encoding headers.

:buffer_size *(number)*
: The amount sent to the browser in each write if streaming is enabled (`:stream` is true).

:disposition *(string)*
