you generate the path using `url_for` or a named route URL generator).

```
def save
  order = Order.new(params[:order])
  if order.save
    redirect_to action: "display"
  else
    session[:error_count] ||= 0
    session[:error_count] += 1
    if session[:error_count] < 4
      self.notice = "Please try again"
    else
      # Give up -- user is clearly struggling
      redirect_to("/help/order_entry.html")
    end
  end
end
```

redirect_to(:back)

Redirects to the URL given by the `HTTP_REFERER` header in the current request.

```
def save_details
  unless params[:are_you_sure] == 'Y'
    redirect_to(:back)
  else
    # ...
  end
end
```

By default all redirections are flagged as temporary (they'll affect only the current request). When redirecting to a URL, it's possible you might want to make the redirection permanent. In that case, set the status in the response header accordingly:

```
headers["Status"] = "301 Moved Permanently"
redirect_to("http://my.new.home")
```

Because redirect methods send responses to the browser, the same rules apply as for the rendering methods—you can issue only one per request.

So far, we've been looking at requests and responses in isolation. Rails also
