create a one-way migration—one that can't be reversed—we'll want to stop the down migration from being applied. In this case, Rails provides a special exception that we can throw:

```
class ChangeOrderTypeToString < ActiveRecord::Migration
  def up
    change_column :orders, :order_type, :string, null: false
  end

  def down
    raise ActiveRecord::IrreversibleMigration
  end
end
```

`ActiveRecord::IrreversibleMigration` is also the name of the exception that Rails will raise if you attempt to call a method that can't be automatically reversed from within a `change` method.
