To reimplement the test for `Cart` as a spec, let's first review the existing test:

rails7/depot_u/test/models/cart_test.rb

```
require 'test_helper'

class CartTest < ActiveSupport::TestCase
  def setup
    @cart  = Cart.create
    @book_one = products(:ruby)
    @book_two  = products(:two)
  end

  test "add unique products" do
    @cart.add_product(@book_one).save!
    @cart.add_product(@book_two).save!
    assert_equal 2, @cart.line_items.size
    assert_equal @book_one.price + @book_two.price, @cart.total_price
  end

  test "add duplicate product" do
    @cart.add_product(@book_one).save!
    @cart.add_product(@book_one).save!
    assert_equal 2*@book_one.price, @cart.total_price
    assert_equal 1, @cart.line_items.size
    assert_equal 2, @cart.line_items[0].quantity
  end
end
```

The setup creates a cart and fetches two products from the fixtures. It then tests the `add_product` in two ways: by adding two distinct products and by adding the same product twice.

Let's start with the setup. By default, RSpec is configured to look in `spec/fixtures` for fixtures. This is correct for a project using RSpec from the start, but for us, the fixtures are in `test/fixtures`. Change this by editing `spec/rails_helper.rb`:

rails7/depot_xa/spec/rails_helper.rb

```
RSpec.configure do |config|
  # Remove this line if you're not using ActiveRecord or ActiveRecord fixtures
» config.fixture_path = "#{::Rails.root}/test/fixtures"
```
