```
»     end
»   end
```

Here's the second half of the spec, which tests the behavior of `add_product` when adding the same item twice:

rails7/depot_xa/spec/models/cart_spec.rb

```
  require 'rails_helper'

  RSpec.describe Cart, type: :model do

»   fixtures :products
»   subject(:cart) { Cart.new }
»
»   let(:book_one) { products(:ruby) }
»   let(:book_two) { products(:two) }
»
»   describe "#add_product" do
»     context "adding unique products" do
»       before do
»         cart.add_product(book_one).save!
»         cart.add_product(book_two).save!
»       end
»
»       it "has two line items" do
»         expect(cart.line_items.size).to eq(2)
»       end
»       it "has a total price of the two items' price" do
»         expect(cart.total_price).to eq(book_one.price + book_two.price)
»       end
»     end

»     context "adding duplicate products" do
»       before do
»         cart.add_product(book_one).save!
»         cart.add_product(book_one).save!
»       end
»
»       it "has one line item" do
»         expect(cart.line_items.size).to eq(1)
»       end
»       it "has a line item with a quantity of 2" do
»         expect(cart.line_items.first.quantity).to eq(2)
```
