Linking Pages Together

It's a rare web application that has just one page. Let's see how we can add another stunning example of web design to our Hello, World! application.

Normally, each page in our application will correspond to a separate view. While we'll also use a new action method to handle the new page, we'll use the same controller for both actions. This needn't be the case, but we have no compelling reason to use a new controller right now.

We already defined a goodbye action for this controller, so all that remains is to update the scaffolding that was generated in the `app/views/say` directory. This time the file we'll be updating is called `goodbye.html.erb` because by default templates are named after their associated actions:

rails7/demo4/app/views/say/goodbye.html.erb

```
<h1>Goodbye!</h1>
<p>
  It was nice having you here.
</p>
```

Fire up your trusty browser again, but this time point to our new view using the URL http://localhost:3000/say/goodbye. You should see something like this screenshot.

Now we need to link the two screens. We'll put a link on the hello screen that takes us to the goodbye screen, and vice versa. In a real application, we might want to make these proper buttons, but for now we'll use hyperlinks.

We already know that Rails uses a convention to parse the URL into a target
