A `link_to` call is within an ERB `<%=...%>` sequence. This creates a link to a URL that will invoke the `goodbye` action. The first parameter in the call to `link_to` is the text to be displayed in the hyperlink, and the next parameter tells Rails to generate the link to the `goodbye` action.

Let's stop for a minute to consider how we generated the link. We wrote this:

```
link_to "Goodbye", say_goodbye_path
```

First, `link_to` is a method call. (In Rails, we call methods that make it easier to write templates *helpers*.) If you come from a language such as Java, you might be surprised that Ruby doesn't insist on parentheses around method parameters. You can always add them if you like.

`say_goodbye_path` is a precomputed value that Rails makes available to application views. It evaluates to the `/say/goodbye` path. Over time, you'll see that Rails provides the ability to name all the routes that you use in your application.

Let's get back to the application. If we point our browser at our hello page, it now contains the link to the goodbye page, as shown in the following screenshot.

We can make the corresponding change in `goodbye.html.erb`, linking it back to the initial hello page:

rails7/demo5/app/views/say/goodbye.html.erb

```
<h1>Goodbye!</h1>
<p>
  It was nice having you here.
</p>
<p>
```
