

This is similar to what we saw before, but in place of source code we see a list of possible routes, how they can be accessed, and the controller action they're associated with. We'll explain this later in detail, but for now look at the Path Match input field. If you enter a partial URL in there, you can see a list of routes that match. That's not needed right now, as we have only two routes, but can be helpful later when we have many.

At this point, we've completed our toy application and in the process verified that our installation of Rails is functioning properly and provides helpful information when things go wrong. After a brief recap, it's now time to move on to building a real application.

What We Just Did

We constructed a toy application that showed you the following:

- How to create a new Rails application and how to create a new controller in that application
- How to create dynamic content in the controller and display it via the view template
