- How to link pages together
- How to debug problems in the code or the URL

This is a great foundation, and it didn't take much time or effort. This experience will continue as we move on to the next chapter and build a much bigger application.

## Playtime

Here's some stuff to try on your own:

- Experiment with the following expressions:
  - `Addition: <%= 1+2 %>`
  - `Concatenation: <%= "cow" + "boy" %>`
  - `Time in one hour: <%= 1.hour.from_now.localtime %>`
- A call to the following Ruby method returns a list of all the files in the current directory:

  ```
  @files = Dir.glob('*')
  ```

  Use it to set an instance variable in a controller action, and then write the corresponding template that displays the filenames in a list on the browser.

  Hint—you can iterate over a collection using something like this:

  ```
  <% @files.each do |file| %>
    file name is: <%= file %>
  <% end %>
  ```

  Note that the first and last lines of this loop use `<%` *without* an equal sign. This causes the code embedded in these markers to be executed *without* inserting the results returned into the output.

  You might want to use a `<ul>` for the list.

## Cleaning Up

Maybe you've been following along and writing the code in this chapter. If so,
