Finally, create a User model by running:

```
$ rails generate devise User
$ rake db:migrate
```

Restart your app.

# Step 12. Check Devise files

Let's check three of the most important things that were added in previous step.

1) The new model User was created, and it contains the following Devise modules:

```
devise :database_authenticatable, :registerable,

     :recoverable, :rememberable, :trackable, :validatable
```

2)In the config/routes.rb file, you can see that the new line was added:

```
devise_for :users
```

If we run the command:

```
$ rake routes | grep users
```

We see the routes that were created for users:

3) All Devise views are located in views/devise folder.

# Step 13. Add Bootstrap to Devise

Now add bootstrap to Devise views.

Modify files:

new.html.erb

links.html.erb

devise/registrations/edit.html.erb:

```
<h2>Edit <%= resource_name.to_s.humanize %></h2>
  <%= form_for(resource, as: resource_name, url:
registration_path(resource_name), html: { method: :put }) do
|f| %>
    <%= devise_error_messages! %>
    <div class="row">
      <div class="form-group col-md-4">
        <%= f.label :email %><br />
        <%= f.email_field :email, autofocus: true, class:
"form-control" %>
      </div>
    </div>
```
