visible (Sign up and Login). It's because you didn't log into the application.
To do that, you have to click the Sign up tab, fill out the registration form, and submit it.

If you fill in the form with correct data, you will be logged into the application and will be redirected to the welcome page.
Now when you expand the Profile tab, you will see the Edit Profile and Logout tabs instead of the Sign up and Login tabs.
Thanks to Devise, you can now sign in, log in, edit your account, and log out.

Step 16. Restrict access to products

Right now, even users that are not logged in can see, add, edit and remove products. Let's make sure that only logged in users can add, edit and remove products. We can do this by adding to app/controllers/products_controller.rb this line:

```
...2
before_action :authenticate_user!, except: [:index, :show]
...4
```

After adding this line of code, reload the browser and check if not logged in user can for example add a new product. If you added the code right, users that are not logged in will will be redirected to the Log in panel and receive the message: "You need to sign in or sign up before continuing."
