```
  def configure_permitted_parameters
    devise_parameter_sanitizer.permit(:sign_up, keys:
[:username, :email, :password])
    devise_parameter_sanitizer.permit(:account_update, keys:
[:username, :email, :password, :current_password])
  end
...11
```

We have now permited additional parameter username for Devise sign_up and account_update actions.
If you did everything correctly, you can now create a new user containing username.
Reload your browser and go to Sign Up. You should see that the new input called Username is displayed in Sign Up form.

Step 18. Add user to product

Let's say that we want to know who the product was created by. To achieve that, first we have to add user to the product.
Run this comment in your terminal:

```
$ rails g migration AddUserToProducts user:references
$ rake db:migrate
```

After that, modify your app/models/product.rb file, to look like this:

```
class Product < ActiveRecord::Base
  belongs_to :user
end
```

and app/models/user.rb file, to look like this:

```
class User < ActiveRecord::Base
  devise :database_authenticatable, :registerable,

    :recoverable, :rememberable, :trackable, :validatable
```
