Now let's add some styles to our application. First, rename the application.css to the application.scss under the app/assets/stylesheets – in order to use imports. Now add these lines after the manifest:

```
@import "bootstrap-sprockets";
@import "bootstrap";

#main-container {
  position: relative;
  padding-top: 50px;
  padding-bottom: 50px;
}

.devise-container {
  width: 345px;
  padding-left: 15px;
}

.product-block {
  width: 750px;
}

.btn {
  text-decoration: none;
}

body {
  background: #f2f2f2;
}

th {
  background-color: #333333;
  color: white;
}

td {
  background-color: #808080;
  color: white;
}
```

Secondly, add after 15th list into assets/javascript/application.js file, this line:

```
//= require bootstrap-sprockets
```

Step 3. Edit application.html.erb
