```
</div>
<br>
<%= link_to 'New Product', new_product_path, class: "btn btn-
primary" %>
```

Let’s also clean app/controllers/products_controller.rb to look like this:

```
class ProductsController < ApplicationController
  before_action :set_product, only:
[:show, :edit, :update, :destroy]

  def index
    @products = Product.all
  end

  def show
  end

  def new
    @product = Product.new
  end

  def edit
  end

  def create
    @product = Product.new(product_params)
    if @product.save
      redirect_to @product, notice: 'Product was successfully
created.'
    else
      render :new
    end
  end

  def update
    if @product.update(product_params)
      redirect_to @product, notice: 'Product was successfully
updated.'
    else
      render :edit
    end
  end

  def destroy
    @product.destroy
    redirect_to products_url, notice: 'Product was
successfully destroyed.'
```
