Debugging Rails Applications

Debugging using ByeBug Gem in Rails 5

Steps

Step 1

Byebug is included in Rails 5 project by default. It supports MRI 2.3.0. When you create a new project, you see the gem is already included in the Gemfile.

```
group :development, :test do
  # Call 'byebug' anywhere in the code to stop execution and
get a debugger console
  gem 'byebug'
end
```

Step 2

Add byebug to the code anywhere. Let's say tasks controller index action.

```
def index
  @tasks = Task.all
  byebug
end
```

Step 3

Start the rails server.

```
rails s
```

Browse to `http://localhost:3000/tasks`.

```
[3, 12] in /Users/bparanj/projects/blog5/app/controllers/
tasks_controller.rb
    3:   # GET /tasks
    4:   # GET /tasks.json
    5:   def index
    6:     @tasks = Task.all
    7:     byebug
=>  8:   end
```
