Only supports MRI 1.9.2 and 1.9.3. For a pure ruby approach not reliant on debugger, check out pry-nav. Note: *pry-nav* and*pry-debugger* cannot be loaded together.

Remote debugging

Support for pry-remote (>= 0.1.4) is also included. Requires explicity requiring *pry-debugger*, not just relying on pry's plugin loader.

Want to debug a Rails app running inside foreman? Add to your Gemfile:

```
gem 'pry'
gem 'pry-remote'
gem 'pry-stack_explorer'
gem 'pry-debugger'
```

Then add `binding.remote_pry` where you want to pause:

```
class UsersController < ApplicationController
  def index
    binding.remote_pry
    ...
  end
end
```

Load a page that triggers the code. Connect to the session:

```
$ bundle exec pry-remote
```

Using Pry with Rails? Check out Jazz Hands.

Tips

Stepping through code often? Add the following shortcuts to `~/.pryrc`:

```
if defined?(PryDebugger)
  Pry.commands.alias_command 'c', 'continue'
```
