When something is logged, it's printed into the corresponding log if the log level of the message is equal to or higher than the configured log level. If you want to know the current log level, you can call the Rails.logger.level method.

The available log levels are: :debug, :info, :warn, :error, :fatal, and :unknown, corresponding to the log level numbers from 0 up to 5, respectively. To change the default log level, use

This is useful when you want to log under development or staging without flooding your production log with unnecessary information.

The default Rails log level is debug in all environments. 2.3 Sending Messages

To write in the current log use the logger.(debug|info|warn|error|fatal) method from within a controller, model or mailer:

```
class ArticlesController < ApplicationController
  # ...
def create
@article = Article.new(article_params)
logger.debug "New article: #{@article.attributes.inspect}" logger.debug
"Article should be valid: #{@article.valid?}"

if @article.save
logger.debug "The article was saved and now the user is going to

be redirected..."
redirect_to @article, notice: 'Article was successfully created.'

else

render :new end

end

# ...

  private
    def article_params
params.require(:article).permit(:title, :body, :published) end
```
