```
(byebug)

# GET /articles
# GET /articles.json
def index
  byebug
  @articles = Article.find_recent
  respond_to do |format|
    format.html # index.html.erb
    format.json { render json: @articles }
```

This way you can move inside the file and see the code above the line where you added the byebug call. Finally, to see where you are in the code again you can type list=

3.3 The Context

When you start debugging your application, you will be placed in different contexts as you go through the different parts of the stack.

The debugger creates a context when a stopping point or an event is reached. The context has information about the suspended program which enables the debugger to inspect the frame stack, evaluate variables
