At any time you can call the backtrace command (or its alias where) to print the backtrace of the application. This can be very helpful to know how you got where you are. If you ever wondered about how you got somewhere in your code, then backtrace will supply the answer.

The current frame is marked with -->. You can move anywhere you want in this trace (thus changing the context) by using the frame n command, where n is the specified frame number. If you do that, byebug will display your new context.

```
Override
   185:
  send_action(method_name, *args)
end
# Actually call the method associated with the action.
# this method if you wish to change how action methods
are called,
(byebug)
(byebug) frame 2
[176, 185] in /PathToGems/actionpack-
5.1.0/lib/abstract_controller/base.rb

dispatched

Override

are called,
(byebug)
# is the intended way to override action dispatching.
#
# Notice that the first argument is the method to be
# which is *not* necessarily the same as the action name.
def process_action(method_name, *args)
  send_action(method_name, *args)
end
# Actually call the method associated with the action.
# this method if you wish to change how action methods
```
