This example shows how you can print the instance variables defined within the current context:

As you may have figured out, all of the variables that you can access from a controller are displayed. This list is dynamically updated as you execute code. For example, run the next line using next (you'll learn more about this command later in this guide).

```
   13      end
   14    end
   15
(byebug)
(byebug) next
[5, 14] in /PathTo/project/app/controllers/articles_controller.rb
5 6 7 8 9

=> 10 11 12 13

# GET /articles.json
def index
  byebug
  @articles = Article.find_recent
  respond_to do |format|
    format.html # index.html.erb
    format.json { render json: @articles }
end 14 end

15 (byebug)
