1   y   at /PathToProject/app/controllers/articles_controller.rb:11

(byebug) delete 1
(byebug) info breakpoints
No breakpoints.
(byebug) delete 1
(byebug) info breakpoints
No breakpoints.
```

Use info breakpoints to list breakpoints. If you supply a number, it lists that breakpoint. Otherwise it lists all breakpoints.

To delete breakpoints: use the command delete n to remove the breakpoint number n. If no number is specified, it deletes all breakpoints that are currently active.

You can also enable or disable breakpoints:

enable breakpoints [n [m [...]]]: allows a specific breakpoint list or all breakpoints to stop your program. This is the default state when you create a breakpoint.
disable breakpoints [n [m [...]]]: make certain (or all) breakpoints have no effect on your program.

3.8 Catching Exceptions

The command catch exception-name (or just cat exception-name) can be used to intercept an exception of type exception-name when there would otherwise be no handler for it.

To list all active catchpoints use catch.

3.9 Resuming Execution
