```
  byebug
  @tasks = Task.all
end
```

Step 11

The up command moves to a higher frame.

```
(byebug) up
```

```
[2, 11] in /Users/bparanj/projects/blog5/app/controllers/
tasks_controller.rb
    2:
    3:   # GET /tasks
    4:   # GET /tasks.json
    5:   def index
    6:     byebug
=>  7:     @tasks = Task.all
    8:   end
    9:
   10:   # GET /tasks/1
   11:   # GET /tasks/1.json
```

This is the step-out function if you have used any GUI debugger.

Step 12

Let's inspect the `task_params`.

```
[23, 32] in /Users/bparanj/projects/blog5/app/controllers/
tasks_controller.rb
   23:
   24:   # POST /tasks
   25:   # POST /tasks.json
   26:   def create
   27:         byebug
=> 28:     @task = Task.new(task_params)
   29:
   30:     respond_to do |format|
   31:       if @task.save
   32:         format.html { redirect_to @task, notice: 'Task
was successfully created.' }
(byebug)
```
