```
  Modifies byebug settings
  Boolean values take "on", "off", "true", "false", "1" or "0". If you
  don't specify a value, the boolean setting will be enabled.
Conversely,
  you can use "set no<setting>" to disable them.
  You can see these environment settings with the "show" command.
  List of supported settings:
  autosave
  autolist
  width
  autoirb
  basename
short paths
  linetrace
  autopry
  stack_on_error -- Display stack trace when `eval` raises an exception
fullpath

  histfile
./.byebug_history
  listsize
  post_mortem
  callstyle
displayed
  histsize
byebug history
  savefile
~/.byebug_save
-- Display full file names in backtraces
-- File where cmd history is saved to. Default:
-- Set number of source lines to list by default
-- Enable/disable post-mortem mode
-- Set how you want method call parameters to be
-- Maximum number of commands that can be stored in
-- File where settings are saved to. Default:
-- Automatically save command history record on exit
-- Invoke list command on every stop
-- Number of characters per line in byebug's output
```
