pry-byebug

Fast execution control in Pry

Adds **step**, **next**, **finish** and **continue** commands
and **breakpoints** to Pry using byebug.

To use, invoke pry normally. No need to start your script or app differently.

```
def some_method
  binding.pry           # Execution will stop here.
  puts 'Hello World'    # Run 'step' or 'next' in the console to move here.
end
```

Installation

Drop

```
gem 'pry-byebug'
```

in your Gemfile and run

```
bundle install
```

Make sure you include the gem globally or inside the `:test` group if you plan to use it to debug your tests!

Execution Commands

step: Step execution into the next line or method. Takes an optional numeric argument to step multiple times. Aliased to `s`

next: Step over to the next line within the same frame. Also takes an optional numeric argument to step multiple lines. Aliased to `n`

finish: Execute until current stack frame returns. Aliased to `f`

continue: Continue program execution and end the Pry session. Aliased to `c`
