b) The computer can teach patients about the background of their medical disorder, reinforce information on their therapeutic diet, help patients apply diet requirements to their life style and make necessary diet changes.

5.6.4. Bed side Monitoring

Computer use include collecting patient's data. ECG analysis, urine output measurements and drug doses at bed side.

5.6.5. Follow-up

Microcomputers provide instant access to medical records, to schedule tests and retrieve laboratory data.

5.6. The actual instruction as the user sees in a computer is divided into:

1. **'Master file'** which stores patients information like age, sex, address, height, weight, patient number and condition.
2. Food site which stores information on food items with their calories, carbohydrates, protein and fat value. The food items are arranged alphabetically under the meal times. The quantity per serving and amount of individual serving will be displayed. Provision for adding and deleting food items is built in.

The diet counselling system begins with patients personal information. The counselling program is divided into 3 sections.

I. Analysis of food intake for a day

II. Summary

III. Printout

I. Analysis of the food intake

This assists the subject to sequentially list all the food items at meals and estimate quantities.

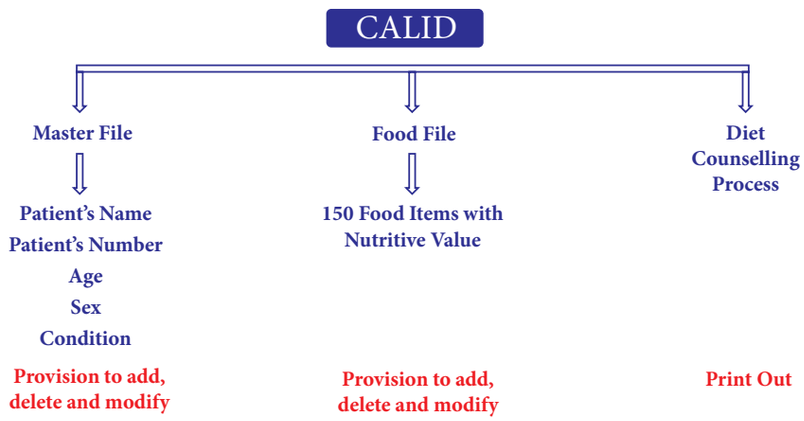

II. Summary

The summary would give the intake for the day for energy, carbohydrate, protein, fat along with the recommended dietary intake.

III. Printout

The printout would give the list of foods to be avoided and recommended along with the quantity per serving. The entire program is presented in Fig.
