Weight status according to BMI range

Weight status	BMI range
Underweight	< 18.5
Normal	18.5 to 24.9
Overweight	25 to 29.9
Obesity (Grade 1)	30 to 34.9
Obesity (Grade 2)	35 to 39.9
Obesity (Grade 3)	40 and above

Grade 1 obesity - It is a self manageable condition and does not interfere with day to day activities. The person leads a healthy normal life.

Grade 2 obesity – Medical and dietetic intervention is needed to manage the situation. The person appear obese and have poor stamina. They are predisposed to diabetes, hypertension, heart ailments, fatty liver, arthritis and varicose vein. This excess weight reduces life expectancy and increases the mortality rate .

Grade 3 obesity– Excess fat interferes with day to day activities. They are susceptible to atherosclerosis and have serious psychological disturbances.

Activity : 1

Calculate your BMI from your weight and height.

BMI =Wt (kg) / Ht (m^2)

Categorise yourself as: Normal / over weight / grade 1 obesity/ grade 2 obesity/ grade 3 obesity.

Waist Circumference:B

The circumference of the waist is used to evaluate a person's abdominal fat.

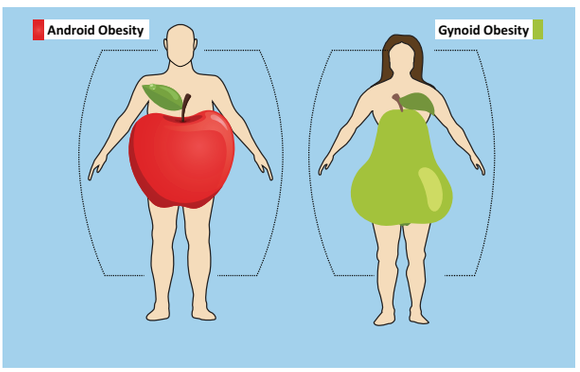

High risk of health problem is indicated as given below:

- Men ≥ 94cms and Women ≥ 80cms of waist circumference.
- Very high risk of health problem is indicated as in
- Men ≥ 102 cms and Women ≥ 88 cms of waist circumference.

Waist to Hip Ratio (WHR):

The normal waist to hip ratio should be 0.7 In upper body obesity ratio for: Women is 0.85 and Men is > 1.0 A WHR of 1.0 or greater in men and 0.8 or greater in women is indicative of android obesity and increased risk of obesity related disease. Fat is deposited in males and females which cause difference in types of obesity apple or android or male pattern and pear or gynoid or female pattern of fat distribution.

ADIPOSE TISSUE DISTRIBUTION IN MEN AND WOMEN

Broka's Index: This is by far the simplest formula to calculate.

(IBW) = Height (cm) – 100 = Ideal Body Weight

7.1.3. Complications of Obesity:

General Mortality and Morbidity: Obese are more prone to chronic diseases like cardio vascular disease, including hypertension and dyslipidaemia, non-insulin dependent diabetes, gall bladder disease and gout

Cardiovascular disease and stroke: Obesity may be independent risk factor for coronary heart disease. A reduction in weight leads to improvement in cardiovascular risk factors like hypertension and abnormal lipid levels. When the blood vessels of the brain are
