Health Risks of Being...

Under Weight

- Heart irregularities
- Lowered resistance to infection
- Reduced ability to fight disease
- Chronicfatigue (tired!)
- Anemia = low iron
- Diarrhea
- Osteoporosis later in life (weak bones)
- Psychological distress, depression (from low confidence and low self-esteem)
- Eating disorders
- Distorted body image

Over weight

- Heart disease
- Depression
- Poor self - esteem
- Hypertension (High Bp)
- Complications in pregnancy
- Maturity Onset diabetes (Type 2)
- Respiratory illness
- High blood cholesterol levels
- Some cancers
- Gallbladder disease
- Arthritis (Sore joints)
- Eating disorders
- Distorted body image
- The above risks become more prevalent among those who are obese for a long period of time.

Fluids:

Take fluids only after a meal instead of taking before meals so that food intake is not reduced. High calorie nourishing beverages such as milk shakes, egg not over low nutrient beverages such as cold – drinks, barley water etc., should be taken.

Exercise:

Regular outdoor exercise helps to stimulate appetite. Emotional well- being is essential to have good appetite. Constipation may reduce the appetite so the bowel movements should be regulated with adequate fluids, exercise and fruits.

A-Z GLOSSARY

Android fat deposition	deposition of fat around thewaist and upper abdomen,apple shape fatdistribution
Body Mass Index	A mathematical formula that correlates with body fat, expressed as weight in kilogram divided by height in meters squared
