## Evaluation

### I. Choose the correct answer (1 mark)

1. Fatty deposits within the arteries are called _____

   a) plaque b)scales

   c) adipose tissue d) callus tissue

2. _____ is an example for trans fat

   a) butter b) ghee

   c) margarine d) sunflower oil

3. _____ is known as good cholesterol.

   a) HDL b) LDL

   c) VLDL d) chylomicron

4. Elevated blood pressure is called _____

   a) hyperglycemia b) hypertension

   c) hyponatremia d) hypervolemia

5. Intake of _____ is restricted when the blood pressure is above normal.

   a) iron b) thiamine

   c) carbohydrate d) sodium

6. _____ intake reduces blood cholesterol levels.

   a) dietary fibre b) simple carbohydrate

   c) starch d) animal protein

7. Retention of water in the tissues of the body is termed as_____

   a) oedema b) inflammation

   c) hyperemesis d) hypertension

### II. Write short answers (2 marks)

1. Define atherosclerosis
2. What are lipids?
3. What is cholesterol?
4. What are lipoproteins?
5. Define myocardial infarction
6. Give two examples each for saturated and poly unsaturated fat
7. List two foods other than salt which contain high levels of sodium

QYEWST

### III. Answer in brief (3 marks)

1. Define hypertension
2. Give the classification for hypertension
3. Why is sodium restricted in hypertension?
4. Define cardiovascular disease
5. List the different lipoproteins

### IV. Answer in detail (5 marks)

1. Briefly write about the types of hypertension
2. Spell out the risk factors for hypertension
3. What are the dietary and life style modifications to be adopted in the prevention and management of hypertension?
4. Give the pathophysiology of atherosclerosis
5. Explain the risk factors for CVD
6. Write about good and bad cholesterol
7. Discuss the role of functional food in reducing the risk for CVD
8. Explain the dietary management in CVD
