Activity :3

Student Resource Sheet

"Changing my diet to improve my Health"

Name of the Student:

I would like to change	How will this improve my health?	How important is this to me?
Example: I would like to drink more water instead of fruit juice	It will hydrate me more effectively and contains no sugar	I know I drink too much juice and water will help me stay hydrated and concentrate better

Activity : 4

- On the school Annual day invite parents to join students for a fun space-themed breakfast in the school's auditorium. The children can set up MyPlate-theme "space stations," where other children can select foods from each food group to "help their day take off" – for example, milk at the dairy station, whole-wheat flour at the grains station, or apples at the fruit station. The student volunteers can explain the stations' connection to MyPlate.
- To emphasize the theme, students can dress in astronaut costumes or prepare a brief skit or presentation about how a healthy breakfast helps them "fuel up" like a rocket ship.
- Students can decorate stars with drawings of their favorite breakfast fruits, vegetables, low-fat dairy, protein foods, and whole grains, creating a starry sky of healthy food choices.

SUMMARY

- Nutrient needs change steadily throughout life into old age, depending on the rate of growth, gender, activities and many other factors.
- Childhood and adolescence are periods of continuous growth and development which places a great demand on nutrients.
- The energy requirements of toddlers and children vary greatly based on differences in growth rate and level of physical activity. Insufficient food will not only result in under nutrition in terms of inadequate weight gain but will also hinder growth.
- Toddlers and young children have an increased need for calcium to promote the rapid bone growth and skeletal development that takes place during these early years of life.
- The school- age period (6-12 years)is called the latent time of growth. School-aged children grow significantly, and are physically active in general. As a result, their nutritional needs are high and critical.
