increase the need for calories, protein, iron and calcium.

- ❖ Inadequate nutritional intake during adolescence can have serious consequences throughout the reproductive years and beyond
- ❖ Obesity and iron deficiency anaemia are major nutritional problems during the adolescent period and girls also suffer from eating disorders like Anorexia nervosa and Bulimia. Premenstrual syndrome and acne are some of the other problems during this period
- ❖ Peer pressure is very high during adolescence. They begin to skip breakfast; choose less milk, fruits and vegetables and consume more soft drinks each day.
- ❖ Finally Adolescence is the time to inculcate good eating and exercise habits which ensure good health forever.

GLOSSARY

Toddler - A toddler is a child 12 to 36 months old. The word is derived from "to toddle", which means to walk unsteadily, like a child of this age.

Bone mineralization - Bone mineralization is the process of laying down minerals like calcium and phosphorus on matrix of the bone

Cognitive functions - Cognitive functions encompass reasoning, memory, attention, and language and lead directly to the attainment of information and, thus, knowledge

Essential fatty acid - An unsaturated fatty acid that is essential to human health, but cannot be manufactured in the body

Omega 3 fatty acids - an unsaturated fatty acid of a kind occurring chiefly in fish oils

Ischemic heart disease - Ischaemic (or ischemic) heart disease is a disease characterized by reduced blood supply to the heart

Hypertension - Hypertension also known as high blood pressure, is a long-term medical condition in which the blood pressure in the arteries is persistently elevated

Diabetes - A disease in which the body's ability to produce or respond to the hormone insulin is impaired, resulting in abnormal metabolism of carbohydrates and elevated levels of glucose in the blood.

Constipation - Constipation is a condition of the digestive system characterized by hard feces that are difficult to pass.

Hyperlipidemia - Hyperlipidemia is a term used to describe high levels of fat in the blood, such as cholesterol and triglycerides.
