

THERAPEUTIC DIETS

CHAPTER 5

OBJECTIVES

- Know the purposes of therapeutic diet adaptations.
- Explain the different ways by which the normal diet can be modified to suit therapeutic diet.
- Understand the principles of routine hospital diets.
- Elaborate on the different modes of feeding.
- Understand the role and responsibilities of dietitians ,
- Applications of computer in diet counseling

CSHE1L

Therapeutic diet is the branch of Dietetics concerned with the use of foods for therapeutic purpose. It is a therapeutic approach for treating medical conditions and their associated symptoms by using specifically tailored diets devised and monitored by a registered dietitian.

5.1. PRINCIPLES OF THERAPEUTIC DIET

A well planned diet providing all the specified nutrients to the body helps to achieve the nutritional homeostasis in a normal healthy individual. However, in disease conditions, the body tissues either do not receive proper nutrients in sufficient amounts or cannot utilize the available nutrients due to faulty digestion, absorption or transportation of food elements, thus affecting the nutritional homeostasis of the sick person. The diet needs to be suitably modified. It is important that the basis for planning such modified diets should be the normal diet.

Therefore diet therapy is concerned with the modification of normal diet to meet the requirements of the sick individual.

5.1.1. The General objectives of therapeutic diet are:

- Maintenance of a sound nutritional status of the subject.
