5.3.2 Parenteral Nutrition

It is another type of special feeding method where the patient is supplied the required nutrients intravenously , directly into a vein .

Types of Parenteral Nutrition	
Total Parenteral Nutrition (TPN)	is the feeding method when no significant nutrition is obtained by other routes.
Peripheral Parenteral Nutrition (PPN)	is the feeding method when administered through vein access in a limb , rather than through a central vein.

5.3.3. Feeding solutions used are

Glucose, Emulsified fat, crystalline amino acids, Vitamins (B 12, folic acid and K) electrolytes (sodium, chlorine, phosphorus, potassium, calcium and magnesium) trace minerals (zinc, copper , chromium , manganese and iodine) water.

5.4. DIETITIAN

A dietitian (also known as a clinical nutritionist) is a health professional who is qualified to give accurate advice and information on all aspects of nutrition and diet. Dietitians apply knowledge of food, nutrition and other related disciplines such as biochemistry, physiology and social science to promote health, prevent disease and aid in the management of illness.

Definition

A dietitian is a person with a qualification in nutrition and dietetics recognised by the national authority. The dietitian applies the science of nutrition to the feeding and education of groups of people and individuals in health and disease.

5.4.1. Administrative Dietitians

Administrative dietitian, called as "Food service systems management dietitian", is a member of the management team and is responsible for the nutritional care of groups through the management of food service systems providing optimal nutrition and quality food.

Typical responsibilities of an Administrative Dietitians include:

- Planning, controlling, and evaluating food service.
