Table 2: India GVA Growth Estimates for 2016–17

Date	Source	Growth%
4 October 2016	RBI, 4th Monetary Policy Statement	7.6
7 December 2016	RBI, 5th Monetary Policy Statement	7.1
6 January 2017	CSO 1st Advance Estimate	7.0
8 February 2017	RBI, 6th Monetary Policy Statement	6.9
28 February 2017	CSO 2nd Advance Estimate	6.7
15 September 2017	RBI Handbook of Statistics	6.6

Source: RBI's Macroeconomic Assessment of Demonetization dated 10 March 2017; Handbook of Statistics on the Indian Economy dated 15 September 2017; MoSPI Press Releases.

Table 2 shows that the RBI's estimates of GVA growth for the year 2016–17 fell from an initial projection of 7.6 per cent to 6.6 per cent. Thus, as per the RBI's estimates, demonetization cost the Indian economy one per cent in reduced growth for 2016–17.

The detailed estimates showed that growth was either stagnant or declined in all sectors other than in agriculture and public administration. In fact, as the RBI grimly commented in their Annual Report published in August 2017: 'Absent the implementation of the 7th Central Pay Commission and One-Rank-One-Pension (OROP) for defence services embedded in government consumption, *real GDP growth would have been lower by two percentage points*.'[9]

Table 3: GDP Growth Estimates by Other Agencies

Agency	2016–17		2017–18	
	Pre-demonetization	Post-demonetization	Pre-demonetization	Post-demonetization
IMF	7.6	6.6	7.6	7.2
World Bank	7.6	7.0	7.7	7.6
ADB	7.4	7.0	7.8	7.8
