Nature of Enterprise	Job Losses October–December 2016	Revenue Loss October–December 2016
Trading Organizations	45 %	55 %
Exporters	25 %	25 %
Medium and Small co.s	35 %	35 %
Large co.s	15 %	20 %

Source: AIMO report, January 2017

As is clear from Table 5 above, there is a direct correlation between the loss of revenues experienced and job losses, which is not surprising given that most of the workforce is contractual or informal. As the catastrophic effects of the cash crunch hit businesses, they took the logical, but harsh, action of swiftly laying off their workforce.

The second report by CMIE estimated that about two million jobs were lost between January and August 2017. CMIE's estimates were based on consecutive waves of its Consumer Pyramids Household Surveys (CPHS), all-India household surveys over a sample size of 1,61,167 households, including 5,19,285 adults.

CMIE started capturing employment statistics in January–April 2016 when they estimated that the total employed workforce in India was 401 million. This included both the organized and unorganized sectors, and agricultural and non-agricultural sectors. Subsequent quarterly surveys showed a growth to 403 million in May–August 2016 and then to 406.5 million in September–December 2016. Post-demonetization, this number fell to 405 million in January–April 2017 and dropped by a further 0.42 million during May–August 2017, thus bringing the *cumulative jobs lost to 2 million*.

A further CMIE report in February 2018 disclosed that the estimated number of *unemployed persons who are actively looking for a job almost touched 31 million* in the week ended 25 February 2018. This is the highest count of unemployed since October 2016. This
