terrorist violence in Jammu and Kashmir, and in Maoist/Naxalite attacks, is shown below:

Table 10: Deaths Due to Terrorism and Naxalism

Year	Deaths in Jammu and Kashmir	Deaths due to Maoist/Naxal Insurgency
2012	117	367
2013	181	421
2014	193	314
2015	174	251
2016	267	433
2017	358	332

Source: South Asia Terrorism Portal: Institute for Conflict Management.

Note: Data on fatalities include death of civilians, security personnel and terrorist insurgents.

As is evident, fatalities in Jammu and Kashmir showed an increase in 2016 and 2017 while fatalities in Maoist/Naxal areas showed no significant decrease.

While it is true that terrorists may be relying on counterfeit currency to fund their operations, to expect demonetization to be the silver bullet that could end terrorism was wishful thinking at the best.

Captain Raghu Raman, former Army Officer and founding CEO of the National Intelligence Grid (NATGRID), explained why demonetization would not and could not affect terrorism in India:[18]

> Terror financing falls into three categories. 'Tactical terror financing' is the money needed to mount specific operations. This aspect would remain unaffected by the demonetization of ₹500 and ₹1,000 notes, for the simple reason that terror operations are incredibly cheap and can be funded by kosher resources. For instance, the entire cost of 9/11 attacks was estimated to be $300,000–400,000… Similarly, an attack like 26/11 in Mumbai can be launched for less than ₹40 lakh (including the bounty that was supposedly paid to the families of the ten terrorists).
