## 5 Impact on the Economy

1. A professionally-run, independent think tank with the largest integrated database on the Indian economy. It conducts the largest survey to estimate household incomes, patterns of spending and savings, and new investments.
2. 'Note ban to badly disrupt eco activity in short run: Moody's', *The Times of India* dated 25 November 2016, http://epaperbeta.timesofindia.com/Article.aspx?eid=31804&articlexml=Note-ban-to-badly-disrupt-eco-activity-in-25112016021033
3. Addressing the Rajya Sabha on 24 November 2016.
4. 'Anti-demonetisation experts stand exposed, says Bhagwati', dated 17 March 2017, https://www.thehindubusinessline.com/economy/antidemonetisation-experts-stand-exposed-says-bhagwati/article9589666.ece
5. The Factor cost GDP figure is calculated by collecting data for the net change in value for each sector during a particular time period. The following eight industry sectors are considered: (1) Agriculture, Forestry and Fishing; (2) Mining and Quarrying; (3) Manufacturing; (4) Electricity, Gas and Water supply; (5) Construction; (6) Trade, Hotels, Transport and Communication; (7) Financing, Insurance, Real estate and Business services; (8) Community, Social and Personal services. The Expenditure at market prices method involves calculating the domestic expenditure on final goods and services during a particular time period. It is measured by aggregating the following elements: (1) Expenditure by Households and Individuals on Consumption of goods and services; (2) Expenditure by Government; (3) Net Investment by Companies and Businesses representing new Capital Formation; and (4) Net Exports (namely the total of Exports minus Imports). Further calculations are made to arrive at nominal GDP (using current market prices) and real GDP (adjusted for inflation), which allows for a comparison across time periods. Among the four numbers, the GDP at factor cost is the most commonly reported. The CSO releases GDP data on a quarterly basis – with a lag of two months from the last working day of the quarter. Annual GDP data is released on 31 May, two months after the financial year-end. Estimates of each set of figures are revised as more data becomes available – and each data point is often revised 2 to 3 times. See MOSPI website: http://www.mospi.gov.in/central-statistics-office-cso; Investopedia
6. GVA at basic prices = GDP at factor cost + Production Taxes – Production subsidies. To explain this in simple terms, GVA now includes what the government earns by way of indirect taxes such as sales tax and excise duty after deducting subsidies. Previously, Indian GDP did not include indirect taxes received by the Government.
7. NSS surveys that would be included were the enterprise survey (2010–11), employment-unemployment survey (2011–12), all-India debt and investment survey, situation
