20. The Quarterly Employment Survey prepared by the Ministry of Labour and Employment, Government of India, is an establishment-based survey providing changes in non-farm employment in the organized sector in India, namely establishments having 10 or more persons. It is limited to employment in non-farm industrial economy covering 8 sectors: manufacturing, construction, trade, transport, education, health, accommodation and restaurant, and IT/BPO. As per the Sixth Economic Census (2013-14), 58.5 million establishments were found to be in operation, employing 131.29 million persons. The survey covers approx. five per cent of the workforce.

22. Capital formation consists of both tangible goods like plants, tools and machinery and intangible goods like high standards of education, health, scientific knowhow, etc. (Hans W. Singer, 'The Distribution of Gains between Investing and Borrowing Countries', *The American Economic Review*, Vol. 40, No. 2, Papers & Proceedings of the 62nd Annual Meeting of the American Economic Association, pp. 473–85, May 1950, https://www.scribd.com/document/256585974/Hans-SINGER-Distribution-of-Gains-Between-Investing-Borrowing). Capital formation requires that a society or country does not apply the whole of its current productive activity to the needs and desire of the immediate consumption, but directs a part of it to the making of capital goods, such as tools and instruments, machines and transport facilities, plant, and equipment, etc. In other words, it is the diversion of a part of society's currently available resources to the purpose of increasing the stock of capital goods so as to make possible an expansion of consumable output in the future. In essence, capital formation/accumulation is synonymous with investment. (Simon Kuznets, *Capital Formation and Economic Growth*, Chapter *International differences in Capital Formation and Financing*, Princeton University Press, 1955, http://www.nber.org/chapters/c1303.pdf).
