wants to prove. Examples: 'There is fire on the mountain, because it is icy'; 'Sound is eternal, because it is produced.'

An inferential argument for the existence of God might run, 'The world has an omniscient creator, because it is a complex product; like a pot.' Here, the pot example invites the accusation that the reason is contradictory because it leads to the conclusion that the world has a creator of finite intelligence.

Vishesha (ultimate particularity): according to ***Vaisheshika***, these are unique features of the basic and simple eternal substances (***nitya-dravya***: atoms, atmosphere, time, space, souls (***atman***) and minds (***manas***)), distinguishing them from each other. Whereas complex entities are differentiated by the different arrangements of their parts, eternal substances are partless. So each must have its own individualising feature. They account for the unique and basic identities of these kinds of entity. The *vishesha* belonging to a soul, which is a non-conscious principle of continuity according to ***Nyaya-Vaisheshika***, is what differentiates it from every other soul.

Vishishta-advaita (School of ***Vedanta***): this is the sophisticated theological articulation of the devotional *Shri Vaishnava* cult, where the term *Vishishtadvaita* is interpreted as meaning 'non-duality' of a differentiated reality: that is to say, reality is a single, structured, ultimately intelligible totality that is internally complex.

The most prominent theorists of this tradition are ***Yamuna***, ***Ramanuja*** and *Vedantadeshika*.

Vivarta-vada: ***Advaita Vedanta*** theory that the differentiated cosmos, including us as individual centres of awareness
