$$\text{Value of the vote of an MLA} = \frac{\text{Total population of state}}{\text{Total number of elected members in the state legislative assembly}} \times \frac{1}{1000}$$

2. Every elected member of either House of Parliament shall have such number of votes as may be obtained by dividing the total number of votes assigned to members of the legislative assemblies of the states by the total number of the elected members of both the Houses of Parliament. This can be expressed as:

$$\text{Value of the vote of an MP} = \frac{\text{Total value of votes of all MLAs of all states}}{\text{Total number of elected members of Parliament}}$$

An illustration of the value of votes of each Member of the Legislative Assemblies of the states, total value of votes of each of the states, the value of votes of each Member of Parliament, the total value of votes of the Members of Parliament and the grand total of value of all the members in the electoral college for the presidential election, 2022 is given in Table 18.4.

The President's election is held in accordance with the system of proportional representation by means of the single transferable vote and the voting is by secret ballot. This system ensures that the successful candidate is returned by the absolute majority of votes. A candidate, in order to be declared elected to the office of President, must secure a fixed quota of votes. The quota of votes is determined by dividing the total number of valid votes polled by the number of candidates to be elected (here only one candidate is to be elected as President) plus one and adding one to the quotient. The formula can be expressed as:

$$\text{Electoral quota} = \frac{\text{Total number of valid votes polled}}{1+1=(2)} + 1$$

Each member of the electoral college is given only one ballot paper. The voter, while casting his/her vote, is required to indicate his/her preferences by marking 1, 2, 3, 4, etc. against the names of candidates. This means that the voter can indicate as many preferences as there are candidates in the fray.

In the first phase, the first preference votes are counted. In case, a candidate secures the required quota in this phase, he/she is declared elected. Otherwise, the process of transfer of votes is set in motion. The ballots of the candidate securing the least number of first preference votes are cancelled and his/her second preference votes are transferred to the first preference votes of other candidates. This process continues till a candidate secures the required quota.
