echo “Connected successfully”;

?>

In the above code snippet, four variables are used to connect to the Database server. They are

- $servername -> Database Server Server IP address
- $username -> Database Server User Name
- $password -> Database Server Password
- $DB_Name -> Database Name

The mysqli_connect function uses these variables to connect Database server to PHP. If connection gets fail, output will be printed with MySQL error code. Otherwise connection is success.

9.1.3 Performing Queries

The main goal of MySQL and PHP connectivity is to retrieve and manipulate the data from MySQL database server. The SQL query statements help in PHP MySQL extension to achieve the objective of MySQL and PHP connection. “mysqli_query” is a function, that helps to execute the SQL query statements in PHP scripting language.

Syntax:

```
mysqli_query(“Connection Object”,”SQL Query”)
```

Example:

```
$con=mysqli_connect(“localhost”,”my_user”,”my_password”,”Student_DB “);
$sql=”SELECT student_name,student_age FROM student”;mysqli_query($con,$sql);
```

9.1.4 Closing Connection:

mysqli_close() Function is used to close an existing opened database connection between PHP scripting and MySQL Database Server.

Syntax:

```
mysqli_close(“Connection Object”);
```

Example:

```
<?php
```
