5	1966	WAN (Wide Area Network)	An experimental paper on WAN (Wide Area Network) has been published by Thomas Marill and Lawrence G.Roberts published in the area of time sharing.
6	1969-1970	ARPANET (Hierarchical routing after 1970's Internet today)	First In 1969, four nodes of ARPANET were connected between four universities namely the university of California at Los Angeles, at Santa Barbara, the Stanford Research Institute and the university of Utah using the 50 Kbit/s circuits. Packet –switched networks was the theoretical work to model was performed by **Leonard Kleinrock** , ARPANET was which underpinned the development of it and his theoretical work on hierarchical routing in late 1970 s with his student Farouk Kamoun remains critical to the operation of the Internet today.
7	1972	X.25 TCP/IP	Using X.25 as commercial services were deployed then was using an infrastructure for expanding TCP/IP networks.
8	1973	Hosts	In1973, a French network named **CYCLADES** was the first for making **hosts** which is responsible for reliable delivery of data, later it became centralized service of network in itself.
9	1973-1979	Ethernet	A memo at Xerox PARC was written by Robert Metcalfe describing Ethernet in 1973, in an Aloha based networking system which was developed in 1960s by Norman Abramson and colleagues at the University of Hawaii. At July 1976 the paper published "Ethernet: Distributed Packet Switching for Local Computer Networks" by Robert Metcalfe and David Boggs, then collaborated on many patents received in 1977 and 1978. Robert Metcalfe pursued making on open standard at 1979.
10	1976	ARCNET	ARCNET was created by John Murphy of Data point corporation in which token-passing network was used first to share the storage device in 1976.
11	1995	NEW FIBRE OPTIC CABLES	The speed capacity of transmission for Ethernet was slightly elevated from 10 Mbit/s to 100Mbit/sat 1995.After 19913, Ethernet supported transmission speed capacity towards gigabit. Frequently, highest speeds up to 100 Gbit/s were appended (still 2016). Ethernet has ability to grow easily (such as quick compatible to support new fiber optic cable speed)
