Figure 10.3 shows Generation of Mobile Networks

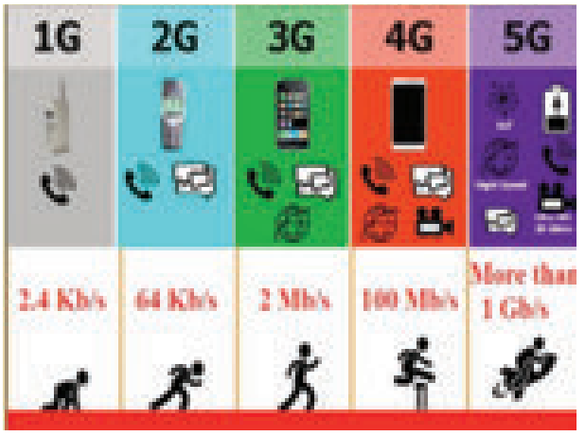

Figure 10.3 Generation of Mobile Networks

Artificial intelligence will help to maintain, manage, and protect the network problems. Now the networks are monitored by algorithm that enables for anomalous build-ups of traffic and activity which may be the result of nasty activities such as (DDos) Distributed Denial-of-Service attacks and attempted hacks. This Artificial Network powering algorithms will become most intelligent; it might find faster and reliable methods of anticipating threats and cleaning networks. Artificial intelligence will be able to predict traffic as it collects and analyzes data in real time.

10.3 Uses of the Computer Networks

The computer networks play a major role in providing information to large , small organization as well as common man. Now a days almost all the companies, bank and stores have implemented the computerized transactions. It may be in same campus, building, city, or at different places (or) cities. For all these purpose the computer networks are used.

The common uses of computer network are

- Communication
- Resource sharing
- Data (or) software sharing
- Money saving

Communication

Using computer networks, we can interact with the different people with each other all over the world. It provides a powerful communication among widely separated employees, team, section. They can easily communicate at very low cost via mobile, social media, telephone, e-mail, chatting, video telephone, video conferencing, SMS, MMS, groupware etc…

Resource sharing

Resource sharing means when one device is accessed by many systems. It allows all kind of programs, equipment's and available data to be accessed by anyone via network irrespective of the physical location of the resource. Simply resource sharing is sharing such as printers, scanner, PDA, fax machine, and modems. For example, many computers can access one printer if it is in network.

Software (or) Data sharing

Using computer network, any application or other software can be stored at a central computer or server. The software can be shared among other computers of the network. It provides high reliability and backup can also be stored at one location for easy availability in case of crash.
