Money saving

Computer networking is also money saving as it reduces paper work, manpower, resources sharing, software sharing and also time saving.

10.3.1 Networks in Business

In twenty first century, communication is very important factor for successful business operations. There by with the growth of computer network and speedy Internet services, business also developed drastically.

With the development of cloud computing, global access and security issues were restricted. Internet conversation made conversation faster, quick decision making and money saving e-banking paved way for easy transactions. Business large or small scale B2C, B2B, B2G,C2B, C2C, C2G, G2B,G2C, G2G or commercial that transfer information across the Internet can be done. Cheap marketing and easy selection of products through Internet with customers satisfaction can also be done. Company renewals, license, other certificates, bill payments, receipts, invoice, stock maintenance, can be done without any geographical boundaries via Internet and computer networks. Government subsidies were available for their business to promote their business by digitization.

Direct human interactions are reduced because of Internet. Buyer directly purchases any product from manufacturer with less cost, middle person brokerage charges are reduced. The network connectivity in business is shown in Figure 10.5

10.3.2 Networks at Home

Now a day, network has become common as it facilitates communication among devices with in the close vicinity of a home. Devices in this network can be smart devices, mobile computers, network printers which are capable of interacting and thereby increase the quality of life inside home in a variety of ways like automation of repetitive tasks, increased personal productivity, enhanced home security and easier access to entertainment. Networks at home were connected in two ways they are:

- Wired network
- Wireless network

A Wired network system is connected with a network cable . For example speakers, CCTV, printers, outdoors, and scanners etc., with cables.

A Wireless network is connecting devices like tablets(tab), indoor cameras and E-readers, etc., without cables (WiFi).

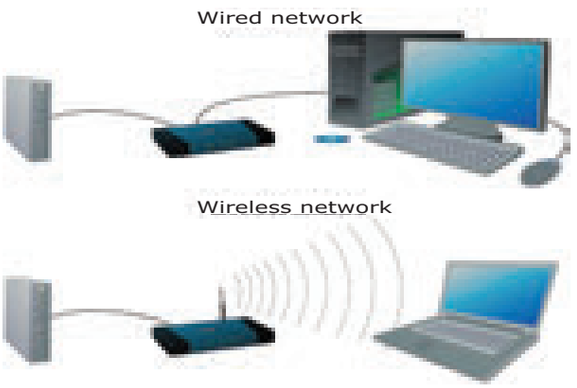

Figure 10.4 Wired and Wireless Network

Network at home helps us to perform e-banking, e-learning, e-governance, e-health, telemedicine, call centers, video conferencing, digitalization of memories, etc. Refer Figure 10.4
