CHAPTER

Network Examples and Protocols

8D4TCC

LEARNING OBJECTIVES

- To know network examples like Intranet, Intranet, Extranet
- Different types of mobile networks
- Know about wlans :802.11
- To Know about RFID
- Discuss briefly about the network protocols

11.1 Introduction

Internet Protocol (IP) is the principle of communication protocol amoung the Internet protocols for layering on datagram across boundaries of other networks. Its main function is to allow Internet working and boost up the Internet.

Internet protocol (IP) will discharge packets from the source host and it will deliver to the destination host via IP address in the packet header.

Network protocols is the usual procedures, rules, formal standards and policies comprised of formats which allows communication between more than one device which is connected to the network. Network protocols have to do end-to-end process of secure on time and manage data or network communication.

All requirements which combine process, on network protocols so as to carry out the communication between routers, servers, computers, laptop, and other authorized networked device. Here on network protocols might be installed and rooters in both sender and receiver to ensure data or network communication and apply to software and hardware nodes which communicate on a network.

The broad types of networking protocols, including:

- Network communication protocols is the basic data communication protocol which consist of HTTP and TCP/IP.
- Network security protocol is which implement security over network communication and include HTTP, SFTP and SSL.
- Network management protocol will Provide network governance and
