- Communication over mobile network is be made up of voice, data, images and text messages.
- RFID –(**R**adio **F**requency **Id**entification) uses **RF** wireless technology to **identify**.
- Open System Interconnection (OSI) model was found in the year 1934, over all basis that permits network protocols along with software and schemes to be developed based on Universal guidelines.
- **Transmission Control Protocol/Internet Protocol**, **TCP/IP** is a set of protocols permitting communications among all computers on the Internet.
- **HTTP** – A protocol used between a web client and a web server protects non-*secure* data transmissions. The core protocol of the World Wide Web.
- **HTTPS** - A protocol used between a web client and a web server permits *secure* data transmissions.
- **FTP** - Used between computers for sending and receiving data. Enables a client to send and receive complete files from a server.
- **Internet Protocol (IP):** routable protocol which uses IP addresses to deliver packets. It is an unreliable protocol, does not guarantee delivery of information.
- **Address Resolution Protocol (ARP):** Resolves IP addresses to MAC (Medium Access Control) addresses.(A MAC address is a hardware identification number that uniquely identifies each device on a network.)
- **Internet Control Message Protocol (ICMP):** Used by network devices to send error messages and operational information.
- **Transmission Control Protocol (TCP):** Provides reliable connection oriented transmission between two hosts. It guarantees delivery of packets between the hosts.
- **Simple Mail Transfer Protocol (SMTP):** Provides e-mail services.
- **Domain Name System (DNS):** A method of refering to other host computers by using names rather than numbers.

A-Z GLOSSARY

Internet	Several networks, small and big all over the world, are connected together to form a Global network called the Internet.
Intranet	It is a website used by organizations to provide a place where employees can access company related information.
Extranet	It is a private network using Internet technology to share part of business information with supplier's partners and customers.
APRANet	Advanced Research Projects Agency Network
TCP/IP	Transmission Control Protocol / Internet Protocol
