domain name that might be wanted by another person in an intention to sell it later for a profit. It involves the registering of popular trademarks and trade names as domain names before the particular company do. Cyber squatters also involve in trading on the reputation and goodwill of such third parties by inducing a customer to believe that it is an official web page.

DO YOU KNOW?

In September 2015, the domain google.com was bought for 12 American dollars by a former Google employee which he later sold it for 6006.13 American dollars.

7. Typopiracy: Typopiracy is a variant of Cyber Squatting. Some fake websites try to take advantage of users' common typographical errors in typing a website address and direct users to a different website. Such people try to take advantage of some popular websites to generate accidental traffic for their websites. e.g. www.goggle.com, www.faceblook.com

DO YOU KNOW?

Hacking refers to unauthorized intrusion into a computer or a network. That is to say breaking security to gain access to a website illegally and intercept confidential information. They would then misuse such information to their advantage or modify and even destroy its contents to harm the competitors.

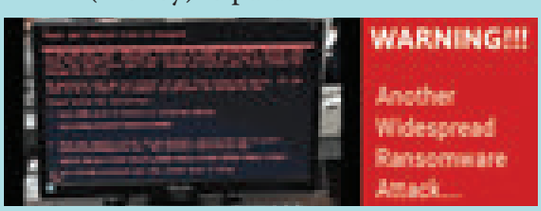

17.3 Dimensions of E-Commerce security

As the security issue is the most worrying issue for E-Business, ensuring the security of E-Commerce activities has become the core research field of E-Commerce. The following are some of the security elements involved in E-Commerce.

- Authenticity: conforming genuineness of data shared.
- Availability: prevention against data delay or removal.
- Completeness: unification of all business information.
- Confidentiality: protecting data against unauthorized disclosure.
- Effectiveness: effective handling of hardware, software and data.
- Integrity: prevention of the data being unaltered or modified.
- Non-repudiation: prevention against violation agreement after the deal.
- Privacy: prevention of customers' personal data being used by others.
- Reliability: providing a reliable identification of the individuals or businesses.
- Review ability: capability of monitoring activities to audit and track the operations.

DO YOU KNOW?

Ransomware: Ransomware is a type of malware that usually encrypt all the files in a target's computer and threatens to publish the critical data unless a ransom (money) is paid.
