INSERT INTO TABLE_NAME (column1, column2, column3, ... columnN)

VALUES (value1, value2, value3, ...valueN);

3.11 SQL

SQL- Structured Query Language is a standard language used for accessing and manipulating databases. It is declared as standard by American National Standards Institute (ANSI) and International Organization for Standardization (ISO) in 1986 and 1987 respectively.

About SQL

- Though SQL is standard language, different versions are maintained to meet out the requirements. Few major functions performed using SQL are listed below:
- Executes queries against a database.
- Retrieves data from database.
- Inserts and updates records in a database
- Delete records from database.
- Creates new databases and new tables in a database.

Types of SQL Commands

Different SQL commands are available to perform various functions. SQL commands are classified into five major categories depending on their functionality. See Table 3.13

Data Definition Language (DDL)

The DDL commands are used to define database schema (Structure). Also to create and modify the structure of the database object in the database. CREATE, ALTER, DROP,RENAME and TRUNCATE commands belongs to this category.

Table: 3.13 SQL DDL COMMANDS List

Commands	Description
CREATE	Used to create database or tables
ALTER	Modifies the existing structure of database or table
DROP	Deletes a database or table.
RENAME	used to rename an existing object in the database
TRUNCATE	Used to delete all table records

Data Manipulation Language (DML)

These SQL commands deals with the manipulation of data present in the database. Most of SQL commands come under DML. INSERT, UPDATE, and DELETE commands belong to this category. See Table 3.14

Table: 3.14 SQL DML COMMANDS List

Commands	Description
INSERT	Adds new rows into database table.
UPDATE	modifies existing data with new data in a table.
DELETE	Deletes the records from the table.

Data Query Language (DQL)

SELECT is the only SQL command used to fetch or retrieve the data from database tables that come under DQL. See Table 3.15

Table: 3.15 SQL DQL COMMANDS List

Commands	Description
SELECT	Retrieve data from the table.
